

USE OF NEW FRBM MODEL TO STUDY THE SOCIO-ECONOMIC PROBLEMS OF GARMENT INDUSTRY WORKERS OF TIRUPUR

T. Karuppasamy
M. Tech
2003-2006

In this dissertation the new notion of fuzzy relational bimaps are defined for the first time. A linguistic questionnaire is used to find the problems faced by the locals, workers and the public. The study clearly reveals the health hazard faced by the workers and the public. Also using this model helps the researcher to get the hidden pattern of the any state vector under study. Conclusions based on this study are given.
